HANDTUFTED COLLECTION

HANDTUFTED CUSTOM RUGS

Handtufted rugs are often made of wool depending on the manufacturer and materials used. Handtufted rugs are created with a tool called a tufting gun. Additional patterns can be carved on the rug with hand shears.

Handtufting is a weaving technique in which the pile is incorporated to a cotton base by hand with a tufting gun. The pattern design is laid out on cotton fabric which is then stretched over a frame. The tufting gun is used to punch the yarn through the fabric and is fastened to a latex base. The yarn is then cut with special scissors and shaved to ensure equal height or different pile heights. This technique allows our skilled artisans to create curved patterns and pile of different heights and densities. The design options are limitless, and execution is extremely precise. This production process requires skilled craftsmen who interpret the design and have solid technical know how and knowledge of colors to achieve the perfect hue.
